

Lab 2: Signal Un-mixing with ICA

Results:

For part 2, I was getting an issue where the audio file was sped up tremendously and I could not slow it down. The results were properly unmixed, but it was hard to understand what the person was saying and the siren noise. The FastICA method unmixed the signals perfectly, and for part 3, you can hear the music properly. The only thing is that the music sounds slightly similar at certain parts, which may be the overlay in sounds or some of the signals being too similar to decipher with code.
